[LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL OBJECTIVE

A dedicated 5th-semester Computer Science student at the University of Management and Technology, working towards a specialization in Cybersecurity and Computer Networks. Backed by 4+ years of foundational experience in C++ logic building, alongside specialized expertise in modern AI workflows and autonomous automation using Python and Cursor. Demonstrated hands-on capability through complex academic projects spanning database design, data structures, and enterprise network deployment. Actively seeking a remote part-time role or technical internship to apply strong technical adaptability, rapid learning, and a commitment to systems defense in solving real-world challenges.

EDUCATION

University of Management & Technology

2024 – 2028

Bachelor of Science in Computer Science (BSCS) • 5th Semester • Lahore, Pakistan

TECHNICAL COMPETENCIES

Programming: C++, C, Object-Oriented Programming (OOP)

AI & Automation: Agentic AI & Autonomous Agents, AI Pair Programming (Python), Prompt Engineering, API Integration

Networking: Cisco Packet Tracer, Network Topology, Routing Protocols, Security & Basic Protocols, Server/PC Configurations, Subnetting

Database: SQL, DBMS, Relational Design, SaaS

Core Concepts: Data Structures & Algorithms (DSA), Software Engineering

Security: Vulnerability Assessment (Beginner)

PROJECTS & PRACTICAL EXPERIENCE

Multi-Site Enterprise Network

June 2026

Cisco Packet Tracer & Routing Protocols

[View Architecture on GitHub](#) [View Network Topology on Portfolio](#)

- Architected and configured a comprehensive multi-site network topology representing a functional corporate infrastructure.
- Implemented dynamic routing protocols, functional server configurations, and foundational endpoint security measures to simulate a real-world enterprise environment.

Integrated Project Management Database (DBMS)

March 2026

Relational Architecture & SQL Development

[View ERD \(Database Schema\) on Portfolio](#)

- Designed and implemented a normalized relational database schema for an Integrated Project Management System.
- Developed SQL queries, joins, constraints, and data retrieval operations.
- Applied DBMS concepts alongside C++, OOP, and DSA to ensure data integrity and optimize query performance.

SERVICES & OFFERINGS

- Database Design & SQL Development** - Schema design, normalization, and query writing, with or without AI-assisted tools.
- C++ / OOP Software Development** - Building, testing, and debugging object-oriented applications.
- Data Structures & Algorithm Problem-Solving** - Delivering efficient solutions with time and space complexity analysis.
- Network Design & Configuration** - Topology planning and subnetting using Cisco Packet Tracer.

- **AI-Assisted Programming & Debugging (Python)** - Utilizing Agentic AI and pair-programming tools to accelerate development cycles.
- **Technical Content Writing** - Producing clear documentation, reports, and explainer articles on Computer Science topics.

CERTIFICATIONS

Cisco Networking Academy: Specialized coursework encompassing foundational and intermediate networking architectures, security protocols, and their respective tools and environments.

1. **Intro to Networks by Cisco**
